
HU vs PPU: $\rho_\alpha = 1500$ and $\rho_\gamma = 500$ kg m^{-3} ($K = 9.869e-12$ m^2, $t_f = 60$ d, $\Delta y = 0.5$ m)
near-heavy $\rho_\beta = 1250$
$m_\beta^{\alpha\gamma} = 1.0$
exact mean $\rho_\beta = 1000$
$m_\beta^{\alpha\gamma} = 0.5$
near-light $\rho_\beta = 750$
$m_\beta^{\alpha\gamma} = 0.0$
$\bar{y}_\beta = \frac{\int_\Omega s_\beta\, y\, dV}{\int_\Omega s_\beta\, dV}$
